Connecting AI technology with AI adopters

Looking to scale
the roll- out of your
AI technology?
We can help!

The desire for Artificial Intelligence (AI) adoption within healthcare is increasing, especially within radiology.

However, the successful adoption of AI in this area is largely dependent on how well the technology integrates into the existing workflows of healthcare organisations.

As the leading provider of Radiology Information Systems to the NHS, our understanding of these existing workflows, our technical expertise and our existing healthcare network provides AI vendors with a quick, practical and scalable route to the adoption of their algorithms.

How we help

To make the integration of AI technology into existing radiology workflows as simple as possible we have developed our AI Connect gateway.

The gateway involves a unique standardised integration approach that simplifies the roll-out of an AI vendor's technology within a healthcare organisation. It allows AI algorithms to be adopted, regardless of the RIS or PACS set ups the organisation is using. The adoption of a single gateway reduces technical complexity and speed of deployment for both the AI vendor and organisation. It also helps support user familiarity for organisations utilising multiple algorithms, something that is often a barrier to AI adoption.

We can also offer access to our extensive network of healthcare customers looking to adopt AI through our AI Connect Marketplace, which is designed to promote and help streamline the roll-out of a range of specialist algorithms.

The AI Connect Marketplace

Interested in
joining our
AI Connect
Marketplace?
Get in Touch!

Our AI Connect Marketplace enables AI vendors to provide healthcare organisations with a single point of reference and information outlining the clinical requirements their technology supports.

The vendor neutral marketplace is open to any AI providers who are willing to work in partnership with Wellbeing Software and use our AI Connect gateway as a means of scaling the adoption of their algorithms.

Inclusion in the marketplace doesn't restrict vendors from pursuing other means of adoption, however we are committed to working with all of our AI Connect Marketplace partners to promote their individual capabilities and provide the simplest route to adoption. We also offer continued support during and after the roll-out period to ensure adoption and ongoing use of the technology is managed effectively.
